Field Engineering Intern Overview:

This is an opportunity to gain amazing experience and evaluate the field of Geotechnical Engineering while you are still in school! As a Field Engineering Intern, you will represent ENGEO on various job sites throughout the Bay Area ensuring the highest quality service and engineering standards are met. You will receive exposure to Geotechnical Engineering on construction sites, interact with contractors and Project Managers, and see first-hand how project designs are brought to life.

Primary Responsibilities

- QA/QC field observations
- Follow design reports and documents
- Use a moisture-density gauge to test soil and rock materials
- Transportation/delivery of samples for laboratory testing
- Use a smartphone/tablet to create accurate and detailed documentation during the testing and observation process
- Provide daily field reports to Project Managers for review

Our Ideal Candidate

- Efficient with time and is an innovative problem-solver
- Works independently or collaboratively and follows instructions with minimal oversight
- Organized and exhibits high attention to detail
- Exhibits excellent verbal and written communication and conflict-resolution skills
- Familiar with construction standards, terminology and methods

All Candidate Criteria - Construction site appropriate vehicle (daily reimbursement), good driving record, drug free, ability to perform potentially strenuous field activity
